Statement of Work

Door to the Universe

September 1, 2005 to August 31, 2007

We propose to stimulate the interest and increase the knowledge of Texas students, their teachers, and the general public about astronomy, our solar system, and sun-earth connections through a series of professional development workshops for elementary and middle school teachers serving under-represented populations. Teachers may choose to attend from one to three days of workshops highlighting inquiry-based, hands-on solar system activities that will prepare them to actively engage students in their classroom.
